

# A career in the oil and gas industry

## Geologist

The purpose of this role is to support ongoing exploration activities.

### Your responsibility and key objectives will be:

- Evaluating, interpreting and analysing geological data, creating maps, maintaining prospect and lead inventories
- Appraising discovery and estimating hydrocarbon volumes, reservoir modelling, and conceptual field well planning in order to ensure identification of high grade drilling location
- Analysing geological data and providing geological inputs for safe and cost effective well design
- Defining technical specifications/preparations and evaluating tenders from a technical standpoint
- Evaluating the hydrocarbon potential of the areas for new application or farm in opportunities
- Maintaining an awareness of competitor and industry activities

**You should have a degree in geology.**

### You will need:

- Seven years in the oil and gas industry
