

A career in the oil and gas industry

Production Engineer

The purpose of this role is to operate our assets efficiently to deliver our production programme.

Your responsibility and key objectives will be:

- To deliver the Extended Well Test operations.
- To plan and deliver a phased production system, from Extended Well Testing on single wells, to first permanent development, and full scale production.
- To manage operational activity to safely meet production performance targets.
- To ensure that the reporting requirements to Joint Venture partners and other stakeholders are met.
- To develop a working relationship with key stakeholders including, technical representatives, Government, and JV partners.
- To ensure that all operations are run in compliance with our Environment, Health and Safety standards.

You should have a tertiary degree in an engineering discipline.

You will need:

- 7-10 years experience in the management of productions operations.
- Outstanding communication and leadership abilities.
- Experience working in a different culture and a developing country.
- Strong delivery track record in various aspects of oil & gas business.
- Knowledge of EHS management systems.
