

A career in the oil and gas industry

Production Technologist

The purpose of this role is to provide production technology support for appraisal and field development planning.

Your responsibility and key objectives will be:

- Providing production technology input for area and individual field development plans. This includes:- Development concept selection, Artificial lift selection and design, Sand production prediction, sand control design, Well performance modelling and production system modelling, Water flood design, souring prediction and prevention, produced water injection, scaling prediction, Flow assurance modelling, and Well completion design.
- Assist in well test planning for exploration and appraisal wells
- Assist in implementation of extended well test projects as well as early production schemes.

You should hold a relevant degree in an engineering discipline.

You will need:

- 7-10 years experience in Production Technology/Field Development Planning.
- Experience with early production systems and developments.
- Good inter-personal, communication and presentation skills, able to work in multi-discipline and multi-cultural teams.
- Able to work independently with minimal direction to tight deadlines
- Able to provide mentorship and skill transfer for junior staff
- A sensitive and proactive attitude towards the Environment, Health & Safety.
