

A career in the oil and gas industry

Reservoir Engineer

The purpose of this role is to provide reservoir engineering support to the assets.

Your responsibility and key objectives will be:

- Subsurface reservoir analytical and simulation studies
- Carrying out gas deliverability studies and presenting results
- Initiating data acquisition programmes and strategy
- Providing gas production profile and gas reserve assessments
- Carrying out gas reservoir engineering business development support for new ventures
- Be the custodian of field production profiles for a range of development scenarios and their related reserve levels

You should have a degree in petroleum engineering.

You will need:

- 5-10 year previous reservoir engineering driven experience and skills, with ideally some exposure to field operations
- Strong reservoir engineering skills in Eclipse, Petrel, PTEX, PVTx and Pansystem
- Communication skills – verbal and written
- Ideally used to international new country environments
