

A career in the oil and gas industry

Well Delivery Manager

The purpose of this role is to maximise asset value by cost effective delivery of fit-for-purpose well design options and operations.

Your responsibility and key objectives will be:

- Leading a multidiscipline team of internal/external technical experts and services
- Developing operational options
- Developing and managing all well operations budgets
- Reporting and communicating all activities effectively
- Managing and coordinating all aspects of the well engineering activities
- Meeting objectives and performance targets and delivering operational performance
- Ensuring all phases comply with policies, standards and management processes
- Limit the impact of well operations on the environment, and health and safety of personnel and communities at or near the wells

You should have an engineering degree or equivalent.

You will need:

- Management of drilling, workover and well operations
- Contracting processes and contractor management
- Management of multi-skilled and multi-national teams
- Onshore, offshore, MDU and Platform activities and interfaces
- Extensive knowledge of all aspects of drilling, workover, wire-line, well control techniques and completion operations including HP/HT operations
- Engineering criteria associated with well construction and operations planning, design/well control issues, hole stability/mud, deviated drilling, completion, testing and production
- Understanding of geological and petroleum engineering priorities
- Well budgets and cost allocation and monitoring
- PSC & JVA agreements and approval processes
